PROFILE SUMMARY

Informatics and Computer Science Final year student at Strathmore University with hands-on experience in data analysis, automation, and software development. Skilled in Python and SQL with a proven track record of building scalable automation systems including pipelines that process 600+ records daily to significantly reduce manual workload. Adept at using web scraping, OCR, and visualization tools (Matplotlib, Excel) to transform unstructured data into actionable business insights. Actively seeking opportunities in data engineering and software development.

EDUCATION

Strathmore University | BSc in Informatics and Computer Science

Expected Graduation: 2027

Relevant Coursework: Machine Learning, Artificial Intelligence, Software Development, Data Analysis, and Data Visualization.

Technical Course: Apple Swift IOS Mobile Application Development

Jan 2025 - Feb 2025

Completed a 6-week project intensive course where I got to learn how to build IOS applications using SWIFT UI and Storyboard. I got to build my first IOS application which was an app where people can create a birthday Wishlist and friends can collaborate on getting each other birthday gifts from it.

Software Development, Power Learn Project

Nairobi, Kenya

Completed a rigorous 16-week software development program where I advanced my skills in full-stack web and cross-platform mobile development. I built responsive web applications using the MERN stack and engineered robust backend architectures using Python, Django, and SQL. Applying these technical skills to a real-world challenge, I designed and developed a cross-platform mobile application using Dart, Flutter, and Firebase aimed at making digital therapy more accessible for young adults.

WORK EXPERIENCE

ICEA LION Group | Data Analysis Intern

Jan 2026- Apr 2026

- **Data Preparation & Problem Identification:** Cleaned and prepared large volumes of policy data using Excel, identifying inconsistencies and inefficiencies in the manual processing workflow. This improved data accuracy and highlighted areas where automation was needed.
- **Automation & System Improvement:** Automated document retrieval using UiPath and later improved the system using Python and Playwright to handle downloads, data extraction, and cleaning more efficiently. This significantly reduced manual effort and increased processing speed.
- **Data Processing & Analysis:** Processed and analyzed the cleaned data using Python and Excel, generating insights to answer business questions and support decision-making. This improved understanding of trends and data reliability.
- **Visualization & Impact Delivery:** Visualized insights using Python (Matplotlib) and Excel pivot tables, presenting findings in a clear and actionable format. This enabled stakeholders to make informed decisions and improved overall workflow efficiency.

PROJECTS

Automated Policy Document Processing System

Jan 2026 - Apr 2026

Built a system that automatically extracts and organizes important information from large volumes of policy documents, removing the need for manual data entry. Using Python and Playwright, the system mimicked human actions to access and download documents, while OCR tools (Google Vision, Tesseract) were used to read and extract data from scanned files. This solved the problem of slow and repetitive document processing by enabling over 600 documents to be handled daily, significantly reducing processing time and manual effort.

Digital Therapy Cross-Platform Mobile Application

Sept 2025 - Dec 2025

Developed a mobile application that connects patients with therapists for remote mental health support. Built with Flutter and Dart and powered by Firebase, the app includes secure login, session booking, real-time messaging, video/audio calls, and mood tracking. It improves access to therapy by making services more convenient and reducing the need for physical visits.

Real Estate Management System

Sept 2024 - Nov 2024

Built a web-based system to help manage rent, electricity, and other bill payments for a real estate property. Using HTML, CSS, JavaScript, and PHP, the system allowed users to track payments and manage tenant information more efficiently. This solved the problem of manual record-keeping by organizing data in one place, improving accuracy and reducing time spent on administrative tasks.

VOLUNTEERSHIP

Kilimani Primary School | Computer studies trainee

Jan 2024 - Feb 2024

Taught grade 8 students computer studies mainly the hardware aspects of a computer as well as software aspects which included programming.

CERTIFICATIONS

Dart with Flutter Mobile App development and Web Development using JavaScript and SQL (Power Learn Project and Safaricom Hook)

App Development with Swift (Strathmore University in partnership with Apple)
